Press Release: PAC Racing Spring Post's contingency for NHRA Suspension Springs

Type: For Immediate Release

Date: 04/08/2014

From: Jason Youd
Business Development Manager
PAC Racing Springs

PAC Racing Springs is pleased to announce additional contingency posting for suspension springs in various classes in NHRA's 2014 contingency program.

We have been a part of the NHRA contingency program since 2007 for valve springs and have had many successes and winners using our valve train products. We have recently added premium suspension springs to our line-up that have proven to be lighter with increased travel over traditional suspension springs. We look to support racers by introducing suspension spring products focused on what the racer needs while improving performance.

PAC Racing has a full suspension spring line-up of products made in our Southfield facility using the same processing equipment we manufacture valve springs on. PAC Racing Springs are 100% made in the USA by craftsmen local to Detroit Michigan using premium processing and proprietary spring alloys. We carry in stock over 10,000 springs and Catalog Parts that are ready to ship. Custom Spring designs and applications are welcome.

You can find more information about our suspension springs by visiting our website at www.RacingSprings.com or by stopping by Hyatt Racing Services located on the NHRA manufacturers midway.
